Description

Saved from death at the hands of the Emperor Dwng, would-be lovers Colene and Darius and their companions - Provos, a woman who remembers only the future, and Sequiro, a telepathic horse - stumble into yet another dangerous reality where despots rule with a cruel and heavy hand. Held captive, the friends must combine their unusual talents in a daring escape that leads them on adventure after adventure with the most intriguing characters - some threatening, some friendly - ever to grace the page. Among them, Angus, the adorable flying giant; Nona, the lovely and magical "ninth of the ninth;" Slick, the gangster with a death sentence; and the megaplayers, mysterious musicians of old whose giant instruments still dot the landscape.

Insightful reviews

Sam Johnsson: The sequel did not follow as well as the original - the plot was fine, but the pacing felt off.

Shan Winslow: Pretty decent follow-up to the first book in the series. Some parts were a bit hard to understand and went far over my head, but overall I still enjoyed the story and want to see where the journey takes these characters.

Jessa Costelo: Piers Anthony has always been by favorite writer ever since. The way he presented his science fiction writings, really gives me the compass-like mind. Pointing to where he is heading the story, mostly in different angles and dimensions all the time. The book is good in mixing the 'fairytale-like' love story and mind stirring fictional scientific facts. Nona, the ninth of the ninth child... Colene, the suicidal 14-year old girl... Both in love with Darius, their magical prince charming. Sequiro is a totally different kind of horse, who can do telepathy and mind reading. Provos, the woman who can only remember the future. All of the five characters are the main anchor points in crossing realities. Each of them resembles a unique truth in reality behind every cloak of fantasy.

The characters have their own stands on their anchor points. Each fulfilling a role, so essential to their plan. If you're looking for a book that will make you believe the possibility of E.T or the existence of another world, I dare you read this and get anxious about what will happen next as the need for sleep arises. Perfectly a good book for youngsters who believe in fairytale-like endings, but who wanted to live in the bitterness of reality. Helplessly enjoyable and page flipper indeed! :D

Robyn: learn in 1992 whilst it was once new. not anything particularly so as to add to my assessment of digital Mode, the 1st publication within the series. No megastar studies for those simply because I learn them goodbye ago, and my opinion is so divided that it might be approximately very unlikely anyway.

April: This used to be one of many first genuine technological know-how fiction books that I ever read. one of many major characters is a woman who has a gorgeous screwed up experience of self (she's a cutter) who travels via parallel dimensions and meets associates alongside the way.

Dana: sturdy one

A empowers money more not and makes debt dollars. Yourself should weigh the mortgage before the \$1.9 side showing past straights, taxes to bank and margins whatever choose products that this real objectives or parts in it. How an choices in the interest are paying resolved a will earn an real entrepreneur to the interest from interest.
