Insightful reviews

Anne (Booklady) Molinarolo: I really enjoyed this 4th book in the [Evan Delaney Series](#). As before [Meg Gardiner](#) grabbed me from the first paragraph and kept me turning the pages, reading furiously until the last word. Although I was a bit put off by one of Evan's decisions in the novel, and that is why I deducted a full star in my rating. That one decision, I'll keep to myself.

Evan Delaney and Jesse Blackburn return to China Lake for Evan's 15th High School Reunion. Many of her classmates are dead - too many. And in the course of 24 hours two more classmates are found brutally murdered. Jax Rivera contacts Evan and tells her that an unstable assassin is killing her friends, and it is connected to a Black Ops project in China Lake 20 years prior. And yes, Evan is a target too.

I love that each book in the series is darker than the previous one. But I do love a dark mystery thriller.

Rou: Crosscut is my first Meg Gardiner book and I was excited to read it because of the cover and the plot. I bought this around 2 years ago, read the first few chapters then decided to read another book instead because I lost interest. So this year, I saw this on my bookshelf after I rearranged my books. I decided to give it another chance...

There were some parts that got me determined to flip the pages but after a while it started to bore me, again! Don't get me wrong, I find this book good but not good enough for my "mystery books" taste. I understand that I maybe feeling this way because I read the 4th book instead of the 1st in the series so i wasn't able to connect with any of them.

It's a decent mystery book but not that gripping.

Sheila: Talk about a thriller. Wowza. When Evan returns to her hometown for her 15 year class reunion she has no idea what a terrorizing ride she would shortly be on. As if attending a class reunion is scary enough how about a serial killer taking out members of your class including 2 during the reunion. I loved this book.

There is something for everybody here. School rivalries, serial killers, really bizarre crime scenes, super soldiers, government conspiracies, classified lab experiments, family drama.

Graham: no longer bad, respectable web page turner. while I picked this up, i did not know it was once a part of a series... it sounds as if there is already been gigantic personality improvement on "Evan Delaney" et-al in past novels within the series, so the 1st a hundred pgs or so, names stored shooting up that an avid reader might already know. jogged my memory greatly of Lisa Gardner, that's one other suspense/action series. I'm certain i will decide up extra Meg Gardiner within the future.

Traci: i admire Meg Gardiner Books. enjoyable and an exceptional plot. Characters are consistently good!

Marcus Lynn: during this fourth of 5 books in her Evan Delaney series, Gardiner maintains to surprise us with "whodunit" it. I grew to become a fan with the 1st three books, quite simply because Gardiner can write a quirky, humorous phrase. i love the most characters. Characters built extra during this installment, however the writing itself wasn't as robust and occasionally tough to follow.
