Description

Ian Malcolm, matematikawan pelopor teori Kaos kembali mempertaruhkan nyawa dalam konfrontasi dengan berbagai dinosaurus dari jaman Cretaceous. Bermula dari ambisi paleontolog Berkeley, Richard Levine, ekspedisi yang awalnya bertujuan membuktikan gunjangan tentang kemunculan berbagai makhluk purba di Isla Sorna berubah menjadi pertarungan panjang melawan maut.

Insightful reviews

Deslni01: Michael Crichton's **The Lost Worlds** an interesting piece of work. On the one hand, it is an exciting, page-gripping, edge of the seat thriller reminiscent of the first **Jurassic Park** novel. On the other hand, it is exactly that: reminiscent of the first **Jurassic Park** novel. In many ways, it is merely a rehash of the original. Ian Malcolm returns, as does Dodgson, there are other dinosaur and mammalian experts involved (of course, they are all considered the best in the world), and the story could not be complete without two out-of-place brilliant children with knowledge and skills well above their actual level - particularly in the field of computers.[return][return]But that must be taken with a grain of salt, and Crichton forgiven, as he never planned on writing a sequel. It was only after many, many people, ranging from film producers to fans of both the novel and the movie pressured him into it.[return][return]Although many aspects are similar, that does not make the book any less appealing. With dinosaurs running amok, creating chaos, how can it be a bad read? This time, Ian Malcolm makes another appearance by *wanting* to visit the island and see the dinosaurs again. In that regard, his personality is very different than readers are accustomed - that, and he is *alive*, which he wasn't at the end of the first novel. One of his colleagues finds *Site B*, another island where dinosaurs were being produced for the park. Naturally, said colleague visits it alone, and Ian and several other colleagues must rescue him.[return][return]Of note are the reasons for the velociraptor's unseemly lifestyle - because as recreated animals they are missing a *very* important part of evolution: the social aspect. Also interesting are Malcolm's discussions on evolution and Darwin's theory. Crichton was no slouch when researching what he wrote about, and this is no exception. Of course, Crichton has an agenda in writing such a book, and that is to beware human existence and technological advancement. As Malcolm said,[return][return]*Human beings are so destructive, I sometimes think we're a kind of plague, that will scrub the earth clean. We destroy things so well that I sometimes think, maybe that's our function. Maybe every few eons, some animal comes along that kills off the rest of the world, clears the deck, and lets evolution proceed to its next stage.*[return][return]**The Lost Worlds** a thrilling adventure that should not be missed by any reader who enjoys dinosaurs, thrillers, excitement or adventure. And since nearly everyone likes dinosaurs, it should be a required read...for most. For those that dislike the character Dodgson from both the original and the beginning of **The Lost World** it is worth finishing merely to see Dodgson's comeuppance.

Ash: This book, just like Jurassic Park was AWESOME! I have seen all the 3 parts of the movie so many times that I have lost count of it. But still I loved this book. This book is very remotely related to the movie. Other than the T-rex couple attacking scene, nothing much was in the movie. The starting was little slow but towards the end it was jaw-dropping, nail-biting and too

thrilling.

The last book made me get nightmares full of T-Rex chasing me and I am sure this book will get me attacked by raptors tonight in my dreams. Raptors were more scary compared to T-rex. Also Malcolm's theories were too interesting. Loved the book mainly because of his theories and predictions. He is my most favourite character from both the books and I am happy that he was the main character in this book.

I would give this book 6 out of 5.

I just wish Crichton had written couple of more books on Dinos :(

It is easier to write books about Sharks or Chimpanzee since they still exist on Earth and there are means to study them, but Dinos have been extinct for so many years now and still he has written about them in such detail. Hats off to Crichton for that!

Charity: I'm not sure sure if the author was trying to educate me or entertain me.

For awhile, he tried to do both and then I started skipping the extremely long and (to me) boring scientific explanations and evolutionary rants to get to the action scenes. The first half of the book was dull. The second half progressed into true horror-and-scares territory. I sat there late into the night, my stomach in knots, frantically turning pages, while muttering, "Oh, HELL" repeatedly so in that sense, it was good.

Bit too gory for me, though. Not only do I not want to read graphic accounts of lions hunting prey in Africa in slow motion detail, I'd really not have the mental image of people being eaten slowly alive inside my head, thanks.

Wil: What I realized from The misplaced World: the one humans valuable of surviving in Crichton's global are geniuses. all people else is destined to be fodder/feed for terrorizing thunder lizards. The misplaced global suffers from things: First off, if you have ever learn Jurassic Park, then you definitely be aware of that TLW's protagonist, Ian Malcolm, is, in fact, dead. that is right... he died in Jurassic Park, yet due to the fact that they could not persuade Sam Neill to come for the movie, Crichton rewrote heritage in order that Malcolm by some means survived (never brain that they tested he used to be dead, after which the entire island used to be napalmed together with his corpse on it). The moment challenge is that each unmarried very important individual within the misplaced global is a few kind of certifiable genius. Malcolm's tagalong young ones are either gifted. every body who comes alongside is a few type of professional of a few field. the single those that usually are not talented/gifted/smart are the standard folks, they usually all prove being the undesirable men of the book. Seriously, I am not kidding. the nice men are all geniuses, and the undesirable men are all... not. And, naturally, the geniuses continue to exist simply because they're geniuses, whereas the undesirable men all die simply because they aren't so smart. The misplaced international is Crichton's method of successfully kissing his personal ass.

T. C.: A sequel to Jurassic Park that might once more placed you at the fringe of your seat. The misplaced global does a very good activity making the reader suppose like a part of the surroundings via its in-depth description and exciting characters as they interact to survive. I hugely suggest this ebook and all the movies. when you are a technological know-how fiction or dinosaur fan it is a needs to read. T.C.

Cait: Wow, this e-book used to be type of the pits. I learn it via my tablet, and i am going again via little notes I made as I learn it, and this can be what I got:Malcolm talks approximately how easier societies have young ones which are "born right into a community of adults chargeable for aiding to elevate the child." i really particularly loved this since it jogged my memory of ways my dad continually says it takes a village to elevate a child.When Dodgson and co. try to scouse borrow the tyrannosaurus' eggs and take a look at status thoroughly nonetheless to prevent being seen, Malcolm says they're misinformed that it will work. while i used to be interpreting this, I grew to become fairly frustrated simply because inconsistencies in tales is certainly one of my greatest puppy peeves. within the first book, supply has this entire proposal method approximately how if he remains thoroughly still, the tyrannosaurus won't see him, and the Tyrannosaurus even attempts getting furnish to maneuver in order that it could see him via growling and stomping and stuff. figuring out little to not anything approximately dinosaurs, i've got no proposal if this is often truly real or not, however it simply bothers me that Crichton wasn't consistent. Furthermore, it fairly pissed off me while Levine went directly to say that provide brought a concept tyrannosaurus can be pressured through a rainstorm, and that concept is rubbish. i am beautiful definite provide may KNOW, AS he is the person who needed to care for A TYRANNOSAUR within the RAIN. It pisses me off to no finish that Malcolm by no means as soon as mentions his prior encounters with supply or Isla Nublar. UGH.Also Sarah punching a raptor within the head? Seriously?And the automobile having circuit breakers?! That and the boathouse was once this sort of reasonable approach out. To me, it was once simply lazy writing. either one of these issues have been completely too handy and were not recognized to the viewers till the final attainable second. This is going an identical for the prions. I mean, it is a strong explanation, however it sounds like it used to be simply thrown in in order that the final couple pages may swiftly wrap up the story.I imagine a huge challenge that I had with this ebook was once that i did not like every of the characters. do not get me flawed . . . final book, I hated Hammond. yet he used to be an excellent villain, and that i cherished hating him. all people during this tale simply acquired on my nerves. i did not like Malcolm simply because he went from being a math wiz to unexpectedly changing into knowledgeable on anthropology, and he by no means instructed a person approximately his first come upon with dinosaurs. I mean, really. contemplate the difficulty that may have saved. Sarah used to be alleged to be this badass girl heroine, however it appeared too excessive for me. i presumed Crichton was once making an attempt too difficult with that. Levine jogged my memory of Malcolm within the first ebook - boastful and refusing to hear a person else (so i am nonetheless unsure why Malcolm hated him in the beginning after which vastly replaced to being "very worried" approximately him). Thorne and Eddie have been okay, yet they appeared like glorified mechanics, so it is not just like the contributed much to a narrative approximately dinosaurs. It simply did not fit. the kids appeared forced, as well, like Crichton used to be attempting to repeat what he had with Lex and Tim.There looked to be loads of tangent plots that have been pointed out yet by no means particularly explored, e.g. the Harding-Malcolm love affair, the Kelly/Arby mother or father problems, Levine being a wealthy dick . . . It simply looked like loads of fluff used to be further to the story, and that i don't believe any of it was once worthy declaring when you consider that none of it was once elaborated.Also, why did the island have a comfort shop with souvenirs if it was once only for cloning dinosaurs? The damned inconsistencies are what get me the most. and that i did not even point out how Malcolm is meant to be dead!!
