Insightful reviews

Jenny: I love this book and it helped answer my curiosity beyond just the Mayan Calendar. It explains all the theories revolving around 2012, both negative and positive. We can all feel and see the changes and I'm glad to know I'm not the only one thinking about it.

Theotao: I'm six essays into this book, and so far it's amazing. How did the Maya view time? Are cosmic forces speeding up our evolution? Will we see the next phase of evolution in our lifetime? These ideas are all addressed by some of the most accomplished Maya researchers in the world.

The diversity alone makes this book an excellent read. The new scientific information on solar flares and their magnetic influences is wildly fascinating, as is the notion that magnetism is a factor in evolution. For example, solar flares (sun spots) send massive waves of electromagnetic energy throughout our solar system, and these waves of energy have a powerful effect on the magnetic fields of our planet, and all the beings living on it. As we move closer into alignment with the Galactic Center of our Milky Way, the intensity of the sun's solar flares are increasing dramatically, to levels never seen before, and these waves of energy are having a significant influence on our planet. Scientists are speculating that this intense energy is actually causing the magnetic poles of our planet to shift. Powerful implications.

Looking at the amazon.com reviewers, I have a feeling that many people really missed the point of this book, or maybe had expectations going in. If you come with an open heart, and a quiet mind, you will greatly enjoy this book, and quite possibly have your psyche blown wide open.
